

## TURN THE WRENCH TO THE RIGHT, POWER UP YOUR ENVIRONMENTAL PERMITTING AND COMPLIANCE EFFORTS

### Who Are We?

Sendero ESG Solutions is a provider of environmental solutions focused on air quality emissions reductions /measurement, surface impacts, and regulatory approvals for our energy customers.

We are part of Sendero Well Services and offer efficient, fullservice environmental solutions for methane quantification, remediation, reclamation, and permitting environmental solutions to our plugging and abandonment (P&A), well servicing, and drilling customers.

We understand the complex challenges that our oil and gas customers face in today's regulatory environment. Pressures are greater now more than ever to stay ahead of environmental compliance, reduce our impacts, and accurately report environmental performance.

We deliver over 50 years of combined environmental and energy industry experience. We are experts in air quality, environmental due diligence, permitting, and site assessments/ cleanup.

### Environmental Services

- Environmental due diligence - we represent buyers and sellers to offer complete risks and opportunities assessments of air quality, land, water, wildlife, and community.
- Compliance audits for environmental and regulatory programs
- Compliance program cost analysis and optimization recommendations
- Leak Detection and Repair (LDAR) Services - Upstream and midstream compliance surveys, audits, and complete federal and state compliance programs.
- Enforcement action technical support services
- EHS Management System implementation and auditing
- Remediation management
- Reclamation oversight

### Decommissioning & Carbon Advisory Services

- Guidance and education for potential carbon credit generation on decommissioning and emissions reduction projects.
- Cost-benefit analysis for legacy well plugging
- Risk ranking of older legacy assets - helping to ensure wells with the most methane emissions can be targeted for plugging first.
- Plugging and reclamation estimates to support your state bonding requirements and asset retirement obligation (ARO) fund balance justification.

**INDUSTRY EXPERTS STRIVING TO FOSTER ENERGY DEVELOPMENT**

### GHG / VOC Emissions Reduction / Reporting Services

- Subpart W in-depth evaluation
- Direct quantification of emission sources/custom emission factor development
- Precise measurement of emissions before and after well decommissioning and/or your emissions reduction projects
- Case study development for showcasing technologies
- Emissions reduction and monitoring technology evaluation and recommendation.
- Preparation and implementation planning for the United Nations Oil and Gas Methane Partnership (OGMP 2.0) and the Department of Energy MMRV program
- Best practice implementation from each of the OGMP 2.0 standards, helping you reach the Gold Standard
- Air quality permitting for New Source Performance Standards (NSPS)
